

# Matrix Vision

As part of a comprehensive eye exam, a digital image of the retinas (the back of your eyes) will be done yearly for every patient. Normally this imaging takes less than 3 minutes.

Retinal problems such as macular degeneration, glaucoma, retinal holes, retinal detachments and diabetic retinopathy can now be seen without dilation for most patients.

This important early image detection is normally \$40, but today your copay is only \$25 with insurance.
